## Task Decomposition

## Product Launch Planner :

### Task Statement :

Launching a product requires synchronized market research, cross-functional planning, audience profiling, and marketing content — all happening in the right order, with the right information flowing between each step. Today, founders, product managers, and marketing teams do this manually, switching between tools, doing their own research, and writing their own content.

A simple chatbot cannot solve this. It answers one question at a time, has no memory between steps, and cannot autonomously chain tasks together. A multi-agent system is necessary because different specialized agents must handle different domains, pass outputs to each other, use real tools like web search, and work autonomously toward a unified goal.

Who is this for:

- **Primary** — Startup Founders who need end-to-end launch guidance with no team support
- **Secondary** — Product Managers in MNCs who need structured, research-backed plans fast
- **Tertiary** — Marketing Teams who need audience insights and messaging ready quickly

### Pipeline Overview :

The pipeline is broken into six sequential agents. Each agent has a clear responsibility, defined inputs and outputs, and specific tools it can use.

### Operation :

Step 1 :

**Input** (Three Parameters involved) **:**

I. **Product Name**
II. **Product Description**
III. **Target Audience**

If any of the fields are unfilled, the operation asks to fill all parameters.

Step 2 :

**Multi-Agentic Operation :**

I. The **Orchestrator Agent** acts as the central controller — it receives the user's product details, manages the sequence of execution, passes outputs between agents, and compiles the final launch plan.

II. The **Market Research Agent** takes the product name, description, and target market as input and uses Tavily Search to scan the web for competitors, market trends, and gaps — returning a structured research summary.
Ex : Competitor Analysis :
Sony PlayStation 5 (PS5) :

- Strengths: Strong library of exclusive titles, advanced Tempest 3D Audio features for immersive sound, high-performance hardware, and a large established user base.
- Weaknesses: Higher price point, and some users may find the exclusive titles limiting if they don't align with their gaming preferences.

III. The **Audience Profiling Agent** receives the product details and market research output, reasons over them to build a target user persona, identify pain points, and recommend the best channels to reach them — returning a structured audience profile.
Ex : User Persona :
Alex ‘Apex’ Chen :

- Name: Alex "Apex" Chen
- Age: 21
- Occupation: Part-time IT Support Technician & Aspiring Esports Player
- Lifestyle: Alex lives a fast-paced life, balancing his work with his passion for gaming. He's digitally native, spending a significant portion of his free time online, both playing games and consuming gaming-related content. He lives with roommates, which means his gaming setup needs to be efficient and not overly intrusive. He's highly social within online communities and actively participates in discussions about new hardware and game releases. His budget is somewhat constrained due to being a student and working part-time, but he's willing to invest in technology that significantly enhances his gaming experience, especially if it gives him a competitive edge. He's always on the lookout for the latest tech that promises better performance and a smoother gameplay experience.

IV. The **Strategy & Roadmap Agent** takes the market research and audience profile as input and produces a phased launch roadmap — covering pre-launch, launch, and post-launch milestones with clear timelines.
Ex : Top SEO Keywords, Trending Search Items, Top Hashtags, Best Posting Times, Trending Topics :
"Esports Ready Console": Positions the product for the competitive gaming market, attracting players who need top-tier performance.

"Best console for competitive FPS games"

#EsportsReady

Weekends:

- Saturday & Sunday Afternoons (1:00 PM - 5:00 PM): Prime gaming hours when many are free.
- Saturday Evening (7:00 PM - 10:00 PM): Peak social and entertainment time.

The Rise of Esports: The continuous growth of esports leagues, tournaments, and professional players creates a constant demand for hardware that offers a competitive edge. Marketing the console as "esports-ready" and highlighting its low-latency capabilities can tap directly into this trend.

V. The **Marketing & Messaging Agent** takes the audience profile and roadmap as input and generates ready-to-use marketing copy — including a product tagline, an email draft, and social media posts tailored to the target audience.
Ex : Timeline, Milestones, Success Metrics :
Week 1-2: Foundation & Teaser Campaign

- Action: Finalize core messaging focusing on "minimal lag," "flawless experience," and "competitive edge."
- Action: Develop high-impact teaser content (short video clips, cryptic social media posts) hinting at revolutionary performance and low latency. Use #LowLatencyGaming, #EsportsReady, #GamingPerformance.
- Action: Launch a dedicated landing page with a countdown timer and email signup for exclusive updates and early access information.

- Action: Initiate outreach to a select group of top-tier gaming tech reviewers and influencers (YouTube, Twitch) under NDA, providing early units for in-depth testing.
- Action: Begin paid social media ad campaigns targeting the 15-30 demographic with performance-focused visuals and benefit-driven copy.
- Action: Map out detailed content calendar for all channels, focusing on SEO keywords like "Low Latency Gaming Console," "Lag Free Gaming System," "Esports Ready Console."

Key influencers/reviewers onboarded and receiving review units.

Website traffic and email signups (target: X unique visitors, Y signups).

VI. The **Advertising & Visual Agent** takes the product name, tagline, audience profile, and brand tone as input and generates an eye-catching, interactive marketing visual — producing the creative asset needed for ads and social media campaigns.
Ex : Timelines, Milestones, Success Metrics :
Week 5 (Launch Week): The Grand Reveal

- Action: Official product launch across all primary channels.
- Action: Embargo lifts for all pre-reviewed content. Coordinated release of reviews, unboxings, and gameplay demonstrations from influencers and media.
- Action: Execute intensive paid advertising campaign across YouTube, Twitch, and social media, featuring the most compelling performance benchmarks and testimonials.
- Action: Go live with "Launch Day Streams" featuring top streamers playing the console, showcasing its capabilities in real-time.
- Action: Activate community engagement: actively monitor social media for mentions, respond to questions, and encourage user-generated content using a dedicated launch hashtag (e.g., #ConsoleNameLaunch).
- Action: Announce launch-day bundles or limited-time offers to incentivize immediate purchase.
- Action: Ensure customer support channels are fully staffed and prepared for launch day inquiries.

Console officially available for purchase.

Sales Volume: Units sold against target for the launch period.

Step 3 :

**Quality Evaluation :**

An independent LLM-as-Judge evaluates your launch plan against a 7-criteria rubric and scores it out of 70.

Example :

Market Research Quality: 9/10 — The competitor analysis is thorough, identifying key strengths and weaknesses. Market trends are relevant and specific to the gaming industry. Market gaps are well-defined, especially the crucial gap for a high-performance, lower-cost option and enhanced lag reduction.

Audience Profile Quality: 10/10 — The persona "Alex 'Apex' Chen" is highly detailed, realistic, and directly linked to the product's value proposition. Pain points are precisely aligned with the console's intended benefits, and the recommended channels and buying behavior analysis are spot-on for the target demographic.

SEO & Keywords Quality: 9/10 — The keywords are highly specific and directly target the product's unique selling propositions (low latency, high refresh rate, esports). Hashtags are relevant and aligned with the target audience's online behavior. Trending topics provide excellent strategic direction.

Strategy & Roadmap Quality: 9/10 — The 12-week roadmap is well-structured across pre-launch, launch, and post-launch phases, with clear, actionable steps. Milestones are well-defined, and success metrics are measurable. The risk mitigation section is comprehensive and practical.

Marketing Content Quality: 10/10 — The tagline is punchy and benefit-driven. The launch email is engaging and effectively communicates the product's value. Social media posts are platform-appropriate and use the defined messaging tone. The website description is compelling and clearly articulates the USP.

Visual Concept Quality: 10/10 — The visual concept is incredibly detailed, covering color palettes, typography, specific design elements, and clear instructions for social media posts, banner ads, and story formats. It strongly aligns with the target audience and effectively communicates the product's core message of speed and performance.

Overall Coherence: 10/10 — The entire launch plan functions as a cohesive and integrated strategy. There is remarkable consistency in messaging, target audience focus, and strategic direction across all sections, from market research to visual concepts. This plan is realistic, actionable, and designed for success.

TOTAL SCORE: 67/70

OVERALL ASSESSMENT: This is an exceptionally high-quality, well-researched, and strategically sound AI-generated product launch plan. It demonstrates a deep understanding of the target market, competitive landscape, and the specific needs of high-intensity gamers, translating these insights into actionable marketing and creative strategies. The plan is coherent, consistent, and ready for implementation.

SUGGESTIONS FOR IMPROVEMENT:

Specific Game Library Strategy: While the plan acknowledges the importance of a game library, it could benefit from a more concrete strategy on how to acquire or develop titles that specifically showcase the console's low-latency advantage, especially in the initial launch phase. This could involve naming potential developer partnerships or types of games.

Pricing Strategy Justification: The plan identifies a market gap for a "high-performance, lower-cost option" but doesn't explicitly state the proposed pricing strategy or how it will be justified to the consumer beyond just being "more accessible." A brief mention of the value proposition in relation to price would strengthen this point.

Post-Launch Content Pipeline Detail: While the post-launch phase outlines objectives, adding a few more specific examples of ongoing content creation would be beneficial. For instance, beyond "developer insights," detailing plans for ongoing competitive gameplay analysis or feature spotlights on the lag reduction tech in action would enrich the strategy.

Step 4 :

**Marketing Visual :**

Generate an eye-catching marketing image for your product using Gemini's image generation model.

This was the complete Task Decomposition Document of the Project Product Launch Planner.
